

# RealLegal Publisher

Version 4.0

## The most advanced and user-friendly product for linking transcripts to exhibits and synchronizing video

### Key Advantages

- Use Publisher 4.0 to create self-contained Publisher Bundle files that include all viewing software
- Easily create unlimited LEF files for direct import into LiveNote SR software
- The updated MediaSync application makes synchronization much easier
- Drive more videography business by making it easy for the client to view video and create video clips
- Import PDF and TIFF files into your Publisher Bundles and manage them in their native formats

RealLegal Publisher™ 4.0 provides the ultimate convenience for you and your clients. Since it is perfectly compatible with E-Transcript Manager 8.0, you can directly add transcripts to Publisher without extra steps. The new version also allows you to easily import PDF and TIFF files and manage them in their native formats. No more conversion process is necessary!

Whether or not your clients use LiveNote SR™ – the #1 most widely used litigation support software of any kind\* – to manage your deliverables, the new and enhanced features in RealLegal Publisher 4.0 make it easy for you to meet their needs.

### Publisher 4.0 produces LiveNote-compatible files

Since 83% percent of top U.S. law firms use LiveNote software\* to manage your transcripts, we enhanced Publisher 4.0 with two methods for producing LiveNote Evidence Format (LEF) files that can be directly imported into LiveNote software.

1. Use RealLegal Publisher 4.0 as you normally would to link exhibits to transcripts and synchronize video to text. Rather than saving the integrated file as a Publisher Bundle that includes robust viewing software, save the integrated file in the LEF format. Upon receipt, your client simply clicks on the LEF file to load it into their LiveNote software.

2. If you aren't sure whether or not your client uses LiveNote software, produce a Publisher Bundle as you normally would. Your client can open the Publisher Bundle with the embedded viewing software, and they have the option to convert the Publisher Bundle to a LEF file (via File | Save As).

RealLegal Unlimited Multimedia subscriptions include unlimited use of RealLegal Publisher 4.0 to produce Publisher Bundles or LEF files. If you already use LiveNote LEFMaker™ to produce 5 or more LEF files per month, a RealLegal Unlimited Multimedia subscription is a more economical alternative, plus it includes several other software tools for refining your deliverables.

### Publisher 4.0 helps drive your videography business

Whether you use Publisher 4.0 to produce a LEF file or a Publisher Bundle, your client will benefit from the latest technology to replay synchronized video, create video clips with corresponding transcript text, and embed the clips in PowerPoint® slides for presentation at settlement conferences or trial. LiveNote users import your LEF file and perform these actions right from their software interface. Alternatively, the Publisher Bundle interface includes an enhanced video player and editor to create video clips with text, save them individually, or export them to PowerPoint. Either way, your RealLegal Publisher 4.0 output helps your clients get more value from your videography services.

### Publisher 4.0 makes it easier to sync video

The MediaSync™ application with RealLegal Publisher 4.0 features an improved interface and more straightforward functionality. The updated MediaSync Wizard makes it easy to match the beginning of video to the beginning of transcript text for hassle free production of synchronized files.

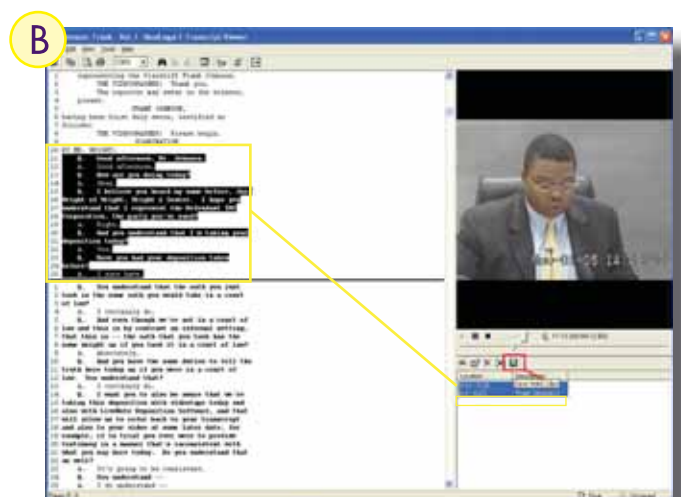

### The bottom line

The exponential growth of LiveNote SR has led to increased demand for court reporting firms that can provide their transcripts, linked exhibits, and synchronized video in a format that is easily imported into the software. RealLegal Publisher 4.0 makes it easier than ever to provide attorneys with LiveNote Evidence Format (LEF) files or RealLegal Publisher Bundles.

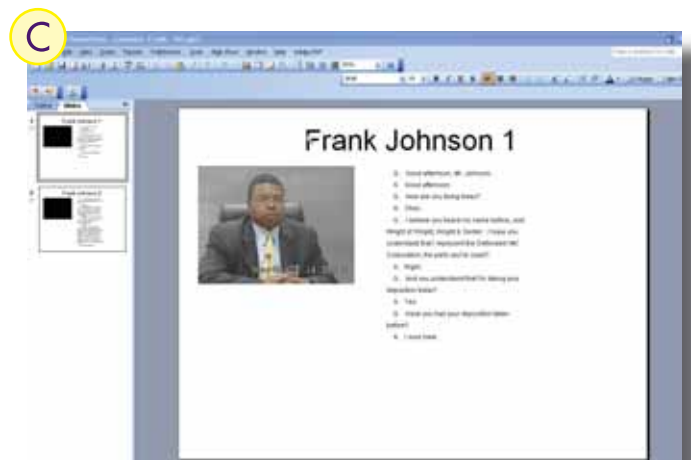

## Cutting-edge video tools for you and your client

**A** The new MediaSync Wizard displays everything you need in one screen. View your transcript and your video side-by-side. Simply click on a line of text to designate it as the start of the video. Selecting the line of text that corresponds to the end of the video works in exactly the same way.

**B** Your client can easily create video clips from your Publisher Bundle or LEF file. In this example, the client is creating a clip of lines 11-25 from the Publisher Bundle interface. Video clips can then be saved individually or saved as PowerPoint slides.

**C** This PowerPoint slide was automatically created and embedded with the video clip and corresponding transcript text.
